GBF SentryLink

Smart Apartment Video Intercom

SentryLink
FROM GBF

Welcome to your GBF SentryLink Smart Video Intercom System!

There are 3 easy steps to setup the app to access your building:

STEP1: Give your email address to your property manager or building manager, who will bind your email address and suite number into database, which will then identify your email address as the room administrator.

STEP2: Create an account in the GBF SentryLink app using the same email address which you gave your property manager.

STEP3: Log in to the app!

Your friend

System Administrator
(e.g. Building Manager)

Give your email address and suite number to your system administrator

YOU

Share your GBF SentryLink service with your family and friends who have downloaded the app and set up an account on their mobile device

Your system administrator will bind your email address to your room number in the cloud server database

Download the app and create an account using the email address you gave your administrator

FAQ

- How many doors can this outdoor station control?
- What is the camera resolution?
- Does this camera have motion detection?
- What are the internet requirements for this system?
- Does this system work with other smart home automation systems?
- Can you review key access event history?
- Can you review video event history?
- How much is the monthly subscription fee? How is it paid?
- How difficult is this product to install?
- Does this system have a tenant name or suite directory on the outdoor station?
- Can I use a key fob or access code to allow access to my building?
- What are the power requirements for the outdoor station?
- Can I remotely manage guest access to my home (e.g. AirBnB)?

FAQ

- How many doors can this outdoor station control?
  - Two different access controls can be controlled through two independent SPDT relays built in to the outdoor station. The relays can also be assigned individually to each suite and shared access code.
- What is the camera resolution?
- Does this camera have motion detection?
- What are the internet requirements for this system?
- Does this system work with other smart home automation systems?

- How difficult is this product to install?
- Does this system have a tenant name or suite directory on the outdoor station?
- Can I use a key fob or access code to allow access to my building?
  - Each resident is assigned a permanent access code (PIN), and optional key fobs or access cards are available and programmed by your system administrator. Residents can also assign temporary PIN's and send them to guests, which are valid for resident-defined periods of time.
- What are the power requirements for the outdoor station?
- Can I remotely manage guest access to my home (e.g. AirBnB)?

  - Residents can send temporary access codes (PIN's) from their mobile devices to a guest with a defined expiry time. The codes can be revoked by the resident at any time. This makes the GBF SentryLink system ideal for remotely allowing individuals access to your building, with AirBnB and delivery personnel being excellent applications of this convenience.
